

Yudong (Wayde) Wan

Irvine, CA | 949 232 8461 | LinkedIn:waydewan | yudongw4@uci.edu

EDUCATION

University of California, Irvine Samueli School of Engineering

Expected: December 2026

Master of Engineering in Computer Science and Electrical Engineering

Shanghai Lixin University of Accounting and Finance

September 2021 – June 2025

Bachelor of Science Data Science and Big Data Technology

- Awards: 2nd Place in May Day Math Contest (2024); 2nd Prize "Xindao Digital Talent Cup" Blockchain Skills Competition (2023)
- Courses: Data Structures and Algorithms, Data Visualization, Machine Learning, Data Mining, Data ETL/EDA, Data Lake

SKILLS

Programming: Python, PyCharm, Pandas, NumPy, Keras, Matplotlib, R, SQL, Java, VBA

AI Frameworks: TensorFlow, PyTorch, Scikit-Learn, RAG, Agentic RAG, Langchain, Langgraph, Claud, Cursor, Anthropic, 8n8

Analytics: Machine Learning, NLP, Clustering, A/B Testing, Time Series, SVM, KNN, PCA, CART, Random Forest, KMeans

Tools: Power BI, Eclipse, Spyder, Anaconda, R Studio, SPSS, Scala, AWS (EC2, S3), Hadoop, Snowflake Alibaba Cloud

Leadership: CDFC 2025 Volunteer endorsed by CCF; 2023 WAIC Volunteer

WORK EXPERIENCE

Calit2 - UC Irvine Division

Irvine, CA

Graduate Student Researcher

Sep 2025 - Present

- Collaborated with other Graduate Students to apply Machine Learning in the control of energy systems and performance prediction
- Conducted ML model development and validation using high-fidelity datasets generated from CFD and transient thermal simulations
- Tested applications of advanced AI models for thermal energy storage (TES) systems under varying scales and conditions

Shanghai Capstone Investment

Shanghai, China

Quantitative Research Intern

June 2025 – September 2025

- Designed and deployed a cloud-based financial database for warehousing and real-time query of large-scale financial data
- Integrated data from markets (futures, options, and equities) for real-time pricing analysis and calculating VaR, CVaR, Sharpe etc.
- Back tested systematic trading strategies on value factors (B/P, EV/Sales) using Python framework on universe of 3,000 stocks
- Advised rebalancing strategies by momentum indicators (MACD, RSI, Bollinger Bands); Single Stock back test showed alpha 0.3
- Engineered Python packages with machine learning to forecast market trends, to identify volatility, enhanced accuracy in 35%

Xendat Data & Analytics

Irvine, CA

Data Science Intern

March 2025 – June 2025

- Build a text parsing tool with RAG frameworks to extract data from unstructured files, saved 3 hours for teams in document control
- Used LLMs for data extraction and graph generation, accelerated HR teams in reporting KPIs for human capital management
- Migrated 3,000,000 rows from Microsoft SQL Server to Snowflake using AWS S3 bucket as a part of company's data migration
- Deployed an internal HCM system with Django framework, integrated employee data analysis and digestible Power BI Dashboards

Funde Sino Life Insurance

Shanghai, China

Data Analyst Intern

June 2023 – August 2023

- Improved the accuracy of renewal rate predictions ~20% by introducing ML Algo in modeling, adopted by 7 teams firmwide
- Used SPSS and Python to streamline data ETLs with feature engineering, built predictive models by machine learning algorithms
- Cleaned payment history data for 20,000+ customers to build predictive models for forecasting bestselling products
- Applied Python and Excel VBA to automate data integrity testing for claims in compliance with insurance pricing regulations

Shanghai City GIS Developing

Shanghai, China

Data Analyst Intern

July 2022 – September 2022

- Clustered 100,000 unstructured geographic data with ArcGIS Pro and GeoPanda, cut 75% time for model training and tuning
- Developed automated scripts in Python and SQL for data ETL, and performed data validation using mapping visualization tools
- Improved 40% in overall ETL SOPs efficiency and increased the accuracy of geographic data classification over 90%; accelerated 2 weeks to achieve milestones for City Council and SteerCo

PROJECTS

Cryptocurrency Price Prediction Using LSTM and FEDformer Enhanced by Sentiment Analysis (IEEE Access) September 2024

- Conducted data EDA on 7,300 Bitcoin-related news articles, posts, and tweets, applying NLP to derive sentiment indicators
- Employed FinBert and CryptoBert sentiment models, integrating daily sentiment scores with Bitcoin's historical OHLCV data
- Developed LSTM and FEDformer models for time-series forecast; optimized model by 20 hyperparameter tuning iterations, RMSE1737

Kaggle Competition: Eedi - Mining Misconceptions in Mathematics

October 2024 – December 2024

- Ranked 82/1446 on the Kaggle leaderboard for model performance; developed a NLP model to predict the relationship between misconceptions and incorrect answer choices in math questions, modeled students' data from a large-scale educational platform
