

Liu

(667) 786-9990 | annyliu0318@gmail.com | Willing to Relocate

Education

Johns Hopkins University

BS in Computer Science, BA in Film and Media Studies

Expected May 2026

GPA: 3.5 / 4.0

Skills

Product Design & Management: Figma, Axure, Adobe XD, After Effects, Scrum, DevOps, CI/CD, Roadmap Planning, PRD Writing, Agile Development, Requirements Analysis, User Persona System

Programming: Python, Java, C/C++, HTML/CSS, JavaScript, Git, LATEX

User Research & Data Analysis: SQL, A/B Testing, Google Analytics, Tableau

Work Experience

Product Owner | JHU Intuitive Computing Laboratory

Apr 2025 – Aug 2025

- Defined product vision for an LLM-powered storytelling robot for children under 10, clarifying learning goals (vocabulary, narrative comprehension) and target users (low- vs. high-income families) through >20 interviews
- Led user research with 10+ low-income and 10+ high-income families; synthesized insights into requirements (session length, difficulty ramp, parent dashboards), prioritizing features in a living roadmap
- Ran a 1-month in-home deployment (20 families) after a summer camp pilot; instrumented interaction logs to track daily active usage, average session length, vocabulary quiz scores, and CSAT
- Analyzed results showing +18% greater vocabulary gains for low-income children vs. baseline and +11% for high-income; improved average weekly engagement to 4.2 sessions/child and caregiver satisfaction to 4.6/5 CSAT by iterating story pacing, feedback prompts, and visual expressions

Product Manager Intern | Xiaobai Intelligent Technology Co., Ltd.

Jun 2024 – Aug 2024

- Owned product requirements for a mental-health screening and coaching robot for students under 16; mapped key user segments (students, parents, counselors) and pain points (hidden stress, stigma, limited access to counselors)
- Designed conversational flows to assess stress level, stressors, and coping style via branching question trees; worked with NLP engineers to align language tone with adolescent safety guidelines
- Conducted 25+ user interviews and analyzed chat logs to identify drop-off points, and defined success metrics
- Shipped 3 releases that raised screening completion by 20% and boosted weekly active users by 15%, while improving “felt comfortable sharing with the robot” ratings from 3.8 to 4.4/5 through tone and privacy messaging updates

Product Manager Assistant Intern | Rich Titanium Byte Vehicle Software Co., Ltd.

Jun 2023 – Aug 2023

- Supported product strategy for a cloud-based vehicle simulation platform that virtualizes car models for pre-release crash and risk testing, reducing OEMs’ physical test costs and cycle time
- Queried SQL usage logs to identify underused features (e.g., certain simulation views) and popular workflows; created 5+ dashboards to track feature adoption, scenario run frequency, and session duration
- Ran 10+ usability tests with OEM engineers and simulation specialists, and translated findings into Axure prototypes
- Partnered with engineering to scope a streamlined scenario wizard and improved visualization defaults, contributing to a 30% increase in multi-scenario test runs and ~15% lift in weekly active teams across pilot customers

Project & Product Design

Baltimore Buzz (Event Recommendation Web App) | Product Manager

Jan 2025 – Present

- Framed the problem of Hopkins and nearby students missing local events; defined primary user personas (students, residents, small organizers) and key jobs-to-be-done (discover relevant events, plan schedules, stay socially connected)
- Co-authored the SRS, user stories, and iteration roadmap for an AI-powered, Baltimore-focused event feed; aligned the team on must-have vs. nice-to-have features (personalized recommendations, filters, RSVP/reminders, social layer)
- Collaborated with engineers to design keyword + location search, interest-based ranking, and feedback loops; instrumented click and rating events to measure relevance
- In an internal pilot (~50 students), the personalized feed variant delivered +22% higher event click-through and +18% uplift in “would attend” intent compared to a recency-only baseline, informing future roadmap prioritization

EmpowerHer Job Platform | Product Lead

Jan 2025 – June 2025

- Led end-to-end product design for a career networking and resource-sharing platform for students (with a focus on supporting women and other underrepresented groups)
- Conducted 40+ user interviews to understand pain points and defined key user journeys
- Prioritized features such as interest-tagged opportunity feed, peer sharing, and lightweight social profiles; iterated UI in Figma and validated flows with rapid usability testing
- Launched an MVP with a small campus cohort, achieving 25% improvement in 4-week user retention
