EDUCATION

Brandeis University

Bachelor of Science in Mathematics

Waltham, MA

August 2024 - May 2027

Relevant Courses: Advanced Programming Techniques in Java, Data Structures and the Fundamentals of Computing, Discrete Structures, Linear Algebra, Economic Statistics

INTERNSHIP EXPERIENCE

Vision X LLC

Software Engineer Intern

San Jose, CA

Jul 2025 - Present

- Supported development of an LLM-based financial analysis and query system for the open-source AlphaFin project
- Built an end-to-end workflow covering base LLM setup, LoRA fine-tuning, and inference deployment, and conducted model training and experimentation using PyTorch and TensorFlow
- Developed a financial forecasting system using LSTM models to predict market trends, performing feature engineering, hyperparameter tuning, and backtesting to improve prediction accuracy
- Engineered financial datasets through automated scraping, cleaning, preprocessing, and vectorization to support model training and retrieval
- Evaluated model performance with metrics such as accuracy, MAE, and MSE; improved AI Agent reliability through prompt engineering and testing

Mingcheng Rubber & Plastic Technology Co., Ltd.

Technical Assistant Intern

China

Oct 2023 - Jan 2024

- Built a Java-based tool for visualizing material costs and generating quotations, reducing pricing errors by ~11%
- Drafted and presented two data-driven proposals, both approved by the CEO and implemented to optimize projects and support company expansion
- Partnered with cross-functional teams to review software workflows, align processes with industry regulations, and improve product reliability

SELECTED PROJECTS

String Manipulation & Algorithm Practice (Java)

Oct 2024

- Developed multiple Java mini-programs to practice string processing and basic algorithm design, including Pig Latin conversion and Caesar cipher encryption
- Implemented Caesar cipher with string traversal, ASCII manipulation, and edge case handling
- Built a batting average calculator with precise formatting (four decimal places)

Minecraft Mod Development (Java Programming)

Jun 2024

- Developed a Minecraft mod using the Gradle build framework, enhancing gameplay with custom inventories, entities, and new dimensions
- Designed and implemented 3D animated entity models with custom textures
- Utilized Berlin Noise algorithm for procedural terrain generation, improving map diversity

Feasibility Study on Hydrogen Energy Application in Drones | Yau Science Award

Mar 2021 - Jun 2021

- Conducted an in-depth literature review to explore the feasibility of integrating hydrogen fuel cells into UAV systems, compiling extensive data to support system-level design considerations
- Designed and executed experiments to evaluate material performance in hydrogen production
- Authored a 25-page research paper detailing methodology, experimental results, and analysis, recognized with First Prize in the 2021 Yau Science Award

SKILLS

Technical Skills: Python, Java, R, TensorFlow

Soft Skills: Collaboration and Teamwork, Problem Solving, Adaptability, Communication, Attention to Detail, Initiative
