Los Angeles, CA, 90012 | (206)403-7386 | aaaidenlin@gmail.com | | github.com/AAAAAiden

Summary

Master's student in Computer Science at USC with 3+ years of full-stack development experience. Proficient in React, Spring Boot, and cloud technologies (AWS, GCP). Seeking a Full Stack Developer position starting January 2024

Education

University of Southern California | Los Angeles, CA

Expected Dec 2024

Master of Science & Engineering in Computer Science

GPA: 3.71/4.00

University of Washington | Seattle, WA

Jun 2018 - Jun 2022

Bachelor of Science in Statistic: Data Science and ACMS: Discrete Math and Algorithm

GPA: 3.69/4.00

Skill

- **Programming Languages:** C, C++, Python, Java, Swift, HTML, CSS, JavaScript, SQL, Golang, R, C#
- **Tools/Frameworks:** React, Ant Design, React Router, Tomcat, Spring, Flask, Node.js, ffmpeg, pytorch, Unity
- **Cloud/Databases:** MySQL, AWS EC2, RDS, S3, Elasticsearch, Google Cloud Storage, GAE, GCE

Work Experience

TalkMeUp | Software Development Intern

Jun 2022 – Aug 2022

- Implemented penetration test to find out the weakness of company's website, and tested bugs for company's product
- Used tools, including OWASP Amass, sublist3r, catsh, and Burp Suite, to collect information on the company's website with Python
- Scanned information with Kioptrix, Nmap, and Enumerated HTTP, HTTPS, SMB, and SSH using Python
- Developed a new Capstone (for attacking website) with virtual machine and tested the website and its security

WRDS Warton | Software Development Intern

Jun 2022 – Aug 2023

- Collaborated with the WRDS backend team to develop the tenK server, enhancing data retrieval efficiency and reliability
- Engineered a company competition graph web application, integrating a dynamic Vue 2 graph component for advanced node filtering
- Led API development for the WRDS graph application using Flask, ensuring robust functionality and seamless data integration
- Orchestrated the deployment of server and web applications using Docker, streamlining publication and version control processes
- Automated and monitored complex workflows with Airflow, significantly improving operational workflows and system reliability

Project Experience

Shadow Diving: WebGL 2D platform puzzle game | Course Project | Team Leader

Jun 2024 – Aug 2024

- Led a team to develop a WebGL-based 2D puzzle game using Unity, designing and implementing player movement logic in C#
- Created interactive game objects using UnityEngine and constructed dynamic shadow effects using Reflection and Rendering techniques
- Developed and optimized six game levels, achieving high user satisfaction based on survey feedback
- Utilized Google Forms for data collection and conducted data analysis with R

StockSage: A stock trading Android App | Course Project

Apr 2024 – May 2024

- Developed a robust Android stock trading application using Java, integrating real-time financial data from Finnhub APIs
- Implemented UI features including custom RecyclerViews, swipe-to-delete functionality, and drag-and-drop reordering
- Utilized third-party libraries such as Volley for HTTP requests and Picasso for efficient image loading and caching
- Incorporated interactive stock charts using HighCharts and WebView, enabling users to visualize historical and real-time market data

DRONE DASH: Dispatch & Delivery Management System | Summer Program | Tech Leader

Oct 2023 – Nov 2023

- Designed and implemented a single web application with React JS with Ant Design model
- Implemented features for guests to create and browse shipments and for admins to create, browse, and change vehicles and shipments
- Improved authentication with token based signup/login/logout flow with React Router v4 and server-side user authentication with JWT
- Used Google Map API to display estimated delivery routes, search addresses and calculate estimated time
- Used Spring Boot to build up delivery controller and vehicle controller to manage shipments and vehicles

Twitch-er: A Twitch Recommendation System Engine | Summer Program

Jun 2022 – Aug 2022

- Built a full-stack web application to recommend users twitch resources (stream/video/clip) and for users to search the resources
- Created a web page with all kinds of user-friendly experiences with React and Ant Design
- Retrieved real Twitch resources using Twitch API, stored data using MySQL, and implemented RESTful APIs using Java servlets
- Extracted game data from Twitch to implement a Content-based algorithm and expended the service to AWS EC2 for better stability

Book!: An online stay rental application based on React and Spring Boot | Summer Program

Jan 2022 – Mar 2022

- Designed and built a single page web application using React. Bootstrap the development with mature component library AntD
- Implemented the backend services based on Spring Boot to support stay upload, delete, search and reserve functionality
- Used MySQL to store user-generated data, e.g. stay information and reservation history, and utilized Google Cloud Storage to store media files for the uploaded stays
- Created geo index by Elasticsearch to support geo-based stay search based on user's selected locations
- Deployed the backend service to Google App Engine for better scalability and reliability
