EDUCATION

University at Buffalo

Master of Science, Computer Science and Engineering / GPA: 3.9

Aug. 2024 – Dec. 2025

Buffalo, NY

University of Calgary

Master of Mechanical Engineering / GPA: 3.9

Jan. 2022

Calgary, AB

Toronto Metropolitan University

Bachelor of Mechanical Engineering

Oct. 2019

Toronto, ON

WORK EXPERIENCE

Blinkle AI

Full Stack Software Engineer Intern

Mar. 2025 – Sep. 2025

New York, NY

Blinkle is a job matching platform that leverages advanced AI technology to connect job seekers with ideal positions.

- Developed AI-powered resume-tailoring features using **TypeScript**, **React**, **Node.js**, and **PostgreSQL**, enabling users to upload and parse resumes, store structured data in a relational database, compute resume scores, and display bullet-level revision suggestions that users can accept or reject in real time.
- Optimized revision speed by implementing eager loading with React Query, eliminating waiting time and significantly enhancing user experience.
- Built responsive, production-ready registration pages with **React** and **Tailwind CSS**, collaborating closely with design and data teams.
- Engineered job autofill functionality in a Chrome extension, involving HTML parsing and mimicking human behavior to streamline applications across ~10 major platforms with near error-free accuracy.
- Utilized Git and GitHub for version control, managing feature branches, conducting code reviews, and resolving merge conflicts in a collaborative team environment.

Admetal Engineering Corporation

Engineering Specialist

Jan. 2022 – Apr. 2024

Toronto, ON

A company specializing in logistics automation and system optimization to improve warehouse and logistics efficiency worldwide

- Automated inventory management systems using Python and VBA, improving accuracy by 45%
- Modernized the company website with React, enhancing client accessibility and achieving 100% uptime post-launch
- Designed and optimized mechanical components for freight elevators and HVAC systems using SolidWorks, improving system reliability
- Developed technical solutions to resolve urgent quality issues, ensuring on-time, high-quality product delivery

PROJECTS

FilmScope Toronto: A Film Showtime Aggregation Website

Sep 2024

- Independently developed a full-stack movie screening website for Toronto, featuring movie listings, user authentication, and a custom admin system for 1,000–2,000 users
- Built a secure RESTful API backend with 25+ endpoints using Java Spring Boot and Spring Security
- Designed a 7-table PostgreSQL database with BCNF normalization, transaction and trigger-based validations, and optimized queries with indexing, reducing execution cost from 10,000+ to under 100
- Implemented a responsive user interface and admin page with React; integrated showtime data via Scrapy, Playwright, and the TMDb API

[Used Car Resale Price Predictor](#)

- Developed a full-stack Used Car Resale Price Predictor with a user-facing web interface and admin management system
- Built Python scripts to scrape data from car trading platforms and managed a scalable cloud database on AWS
- Performed data cleaning, formatting, and exploratory analysis, reducing data errors by 20%
- Implemented machine learning models (Gradient Boosting, Random Forest, XGBoost) achieving 86%+ prediction accuracy
- Created an interactive admin page with authentication for data management and a modern UI for price predictions

SKILLS, TECHNOLOGIES & INTERESTS

- **Skills:** React (Redux); Python (Numpy, Pandas, Scrapy, Scikit-Learn); JavaScript (TypeScript); Node.js; Java; CSS (Tailwind CSS); HTML; SQL; Spring Boot; C; Git
- **Technologies:** Full-Stack Development; Web Development; Database; Machine Learning; Web Scraping; Data Visualization
- **Interests:** Hiking; Movie; Reading; Traveling; Accordion
